For adults living with NARCOLEPSY...

BREAK THROUGH to new possibilities

WAKIX® (pitolisant) is a first-of-its-kind once-daily tablet that is FDA approved to treat excessive daytime sleepiness (EDS) in adults with narcolepsy

Important Safety Information

Do not use WAKIX if you have severe liver disease.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
Narcolepsy Shouldn’t Stop You From Living Your Life

Living with narcolepsy is difficult, and finding ways to manage your excessive daytime sleepiness (EDS) can be a challenge.

You are not alone.
Living With Narcolepsy

Up to 200,000 people in the United States are living with narcolepsy

Everyone with narcolepsy has excessive daytime sleepiness (EDS), the persistent feeling of tiredness

People with EDS in narcolepsy

- May fight to stay awake and alert throughout the day or fall asleep without warning
- May wake up feeling refreshed but feel sleepy again in a few hours
- Are most likely to feel sleepy in situations that require no active participation, such as watching TV or riding in a car
Whether you’re newly diagnosed with narcolepsy or have been diagnosed for years and are ready for a change, talk to your healthcare provider about how WAKIX might help manage your excessive daytime sleepiness (EDS).

**The following pages will help you understand**

- How WAKIX works
- What side effects may occur
- How to take WAKIX
- The *WAKIX for You* support program

**Indications and Usage**

WAKIX is a prescription medicine for the treatment of excessive daytime sleepiness (EDS) in adult patients with narcolepsy.

**Important Safety Information**

Do not use WAKIX if you have severe liver disease.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
Why WAKIX® (pitolisant)?

- **WAKIX** is a first-of-its-kind medication that increases histamine levels in the brain.
- WAKIX is a once-daily tablet that is FDA approved to treat excessive daytime sleepiness (EDS) in adults with narcolepsy.
- WAKIX is the only FDA-approved treatment for people with narcolepsy that is not a controlled substance.
  - A controlled substance is a drug or chemical that is regulated by the government based on its potential for abuse and dependence.
- WAKIX is not a stimulant.

**Important Safety Information**

Tell your healthcare provider about all your medical conditions, including if you have heart rhythm irregularities, were born with a heart condition, or the levels of electrolytes in your blood are too high or too low. WAKIX has an effect on the electrical activity of the heart known as QT/QTc prolongation. Medicines with this effect can lead to disturbances in heart rhythm, which are more likely in patients with risk factors such as certain heart conditions, or when taken in combination with other medicines that affect QT. Tell your healthcare provider about all the other medicines you take.

The risk of QT prolongation may be greater in patients with liver or kidney disease. WAKIX is not recommended in patients with end-stage kidney disease.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
How Does WAKIX® (pitolisant) Work?

The way that WAKIX works to treat excessive daytime sleepiness (EDS) in adults with narcolepsy is not fully understood.

It is thought that WAKIX works due to how it affects histamine. WAKIX increases histamine levels in the brain.

Histamine is a natural chemical in the brain that is important for wakefulness.

WAKIX increases histamine levels in the brain.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
Clinical Trials With WAKIX® (pitolisant)

WAKIX was studied in two clinical trials in 159 adults with narcolepsy.

- The effect of WAKIX was compared with placebo (sugar pill) for the treatment of excessive daytime sleepiness (EDS) using a scale called the Epworth Sleepiness Scale (ESS).
- In the trials, 97 people were treated with WAKIX, and 62 people received placebo.

The majority of patients in the trials reported severe EDS (ESS score ≥16), which means they had a high chance of dozing or falling asleep in everyday situations, such as:

- Reading
- Watching TV
- Sitting and talking

Trial 1 was 8 weeks and included 61 adults with narcolepsy (31 people were treated with WAKIX and 30 received placebo). About 80% of the people in the trial had cataplexy, another common symptom of narcolepsy, and about 20% did not.

Trial 2 was also 8 weeks and included 98 adults with narcolepsy (66 people were treated with WAKIX and 32 received placebo). In this trial, 75% of people had cataplexy and 25% did not.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
In clinical trials, WAKIX showed significantly greater improvement in ESS score compared with placebo

An improvement in ESS score means a lower chance of dozing or falling asleep in everyday situations.

• Everyone responds to medication differently. Individual responses varied in the clinical trials.

Important Safety Information

The most common side effects seen with WAKIX were insomnia, nausea, and anxiety. Other side effects included headache, upper respiratory infection, musculoskeletal pain, heart rate increased, and decreased appetite. These are not all the possible side effects of WAKIX. Tell your healthcare provider about any side effect that bothers you or that does not go away.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
Indications and Usage

WAKIX is a prescription medicine for the treatment of excessive daytime sleepiness (EDS) in adult patients with narcolepsy.

Important Safety Information

Do not use WAKIX if you have severe liver disease.

Tell your healthcare provider about all your medical conditions, including if you have heart rhythm irregularities, were born with a heart condition, or the levels of electrolytes in your blood are too high or too low. WAKIX has an effect on the electrical activity of the heart known as QT/QTc prolongation. Medicines with this effect can lead to disturbances in heart rhythm, which are more likely in patients with risk factors such as certain heart conditions, or when taken in combination with other medicines that affect QT. Tell your healthcare provider about all the other medicines you take.

The risk of QT prolongation may be greater in patients with liver or kidney disease. WAKIX is not recommended in patients with end-stage kidney disease.

The most common side effects seen with WAKIX were insomnia, nausea, and anxiety. Other side effects included headache, upper respiratory infection, musculoskeletal pain, heart rate increased, and decreased appetite. These are not all the possible side effects of WAKIX. Tell your healthcare provider about any side effect that bothers you or that does not go away.

Please see additional Important Safety Information on page 10 and accompanying Full Prescribing Information.
Tell your healthcare provider about all the medicines you take or plan to take, including prescription and over-the-counter medicines. Some medicines can increase the amount of WAKIX that gets into your blood and some medicines can decrease the amount of WAKIX that gets into your blood. The dosage of WAKIX may need to be adjusted if you are taking these medicines.

WAKIX can also decrease the effectiveness of some medicines, including hormonal birth control methods. You should use an alternative non-hormonal birth control method during treatment with WAKIX and for at least 21 days after discontinuation of treatment.

Tell your healthcare provider if you are pregnant or planning to become pregnant. There is a pregnancy exposure registry that monitors pregnancy outcomes in women who are exposed to WAKIX during pregnancy. You are encouraged to enroll in the WAKIX pregnancy registry if you become pregnant while taking WAKIX. To enroll or obtain information from the registry, call 1-800-833-7460.

The safety and effectiveness of WAKIX have not been established in patients less than 18 years of age.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088. You can also report negative side effects to Harmony Biosciences, LLC at 1-800-833-7460.

Please see accompanying Full Prescribing Information.

n indicates the number of people who were treated with WAKIX or received placebo.

*Indicates side effects for similar terms that were combined.

These are not all the possible side effects of WAKIX. Tell your healthcare provider about any side effect that bothers you or that does not go away.

In these clinical trials, 3.9% of people treated with WAKIX stopped treatment due to side effects, which was similar to people who received placebo (3.5%).

Important Safety Information

The safety and effectiveness of WAKIX have not been established in patients less than 18 years of age.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
What Else Should I Know About WAKIX® (pitolisant)?

In a study where WAKIX was taken with sodium oxybate or modafinil, there were no significant interactions between medications.

- Tell your healthcare provider about all the medicines you take or plan to take.

WAKIX may reduce the effectiveness of hormonal contraceptives (birth control).

- Women who can become pregnant should use an alternative non-hormonal type of birth control while taking WAKIX and for at least 21 days after discontinuation of treatment.

WAKIX is the only FDA-approved treatment for people with narcolepsy that is not a controlled substance.

- A controlled substance is a drug or chemical that is regulated by the government based on its potential for abuse and dependence.

Indications and Usage

WAKIX is a prescription medicine for the treatment of excessive daytime sleepiness (EDS) in adult patients with narcolepsy.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
How Should I Take WAKIX® (pitolisant)?

Take WAKIX as soon as you wake up

WAKIX tablets are taken once daily in the morning, as soon as you wake up.
- If you miss a dose, take the next dose the following morning, as soon as you wake up.

WAKIX dosing

The recommended dosage range for WAKIX is 17.8 mg to 35.6 mg once daily.
- Your healthcare provider may increase your dose each week to find the right dose for you. This process is called titration.

Sample Dosing Schedule

<table>
<thead>
<tr>
<th>Week 1</th>
<th>Week 2</th>
<th>Week 3</th>
<th>Beyond Week 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.9 mg once daily</td>
<td>17.8 mg once daily</td>
<td>May increase to 35.6 mg once daily</td>
<td>Continue to take WAKIX as your healthcare provider has prescribed</td>
</tr>
<tr>
<td>(two 4.45-mg tablets)</td>
<td>(one 17.8-mg tablet)</td>
<td>(two 17.8-mg tablets)</td>
<td></td>
</tr>
</tbody>
</table>

Always take WAKIX exactly as your healthcare provider has prescribed.

Important Safety Information

Tell your healthcare provider about all the medicines you take or plan to take, including prescription and over-the-counter medicines. Some medicines can increase the amount of WAKIX that gets into your blood and some medicines can decrease the amount of WAKIX that gets into your blood. The dosage of WAKIX may need to be adjusted if you are taking these medicines.

WAKIX can also decrease the effectiveness of some medicines, including hormonal birth control methods. You should use an alternative non-hormonal birth control method during treatment with WAKIX and for at least 21 days after discontinuation of treatment.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
It is important to tell your healthcare provider about your medical history when starting a new medication

Your healthcare provider may prescribe WAKIX differently depending on your specific needs.

Tell your healthcare provider if you:

• have heart, liver, or kidney problems
• are taking other medications
• have responded differently to other medications in the past

Tell your healthcare provider if you are pregnant or planning to become pregnant.
There is a pregnancy exposure registry that monitors pregnancy outcomes in women who are exposed to WAKIX during pregnancy. You are encouraged to enroll in the WAKIX pregnancy registry if you become pregnant while taking WAKIX. To enroll or obtain information from the registry, call 1-800-833-7460.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
What Should I Expect When I Take WAKIX® (pitolisant)?

When starting a new medication, especially one for a chronic disorder like narcolepsy, it is important to talk to your healthcare provider so he or she can help you understand what to expect with treatment.

Here are a few things for you to discuss with your healthcare provider when starting WAKIX.

It may take up to 8 weeks for some patients to notice a response to treatment with WAKIX.

- Ask your healthcare provider to explain how WAKIX works and how to know if you’re responding to treatment.

WAKIX is not a stimulant.

Talk to your healthcare provider about how you are feeling after starting WAKIX.

- Tell your healthcare provider about any improvements you notice as well as any potential side effects. Don’t stop or change the dose on your own without talking to your healthcare provider first.

Important Safety Information

The most common side effects seen with WAKIX were insomnia, nausea, and anxiety. Other side effects included headache, upper respiratory infection, musculoskeletal pain, heart rate increased, and decreased appetite. These are not all the possible side effects of WAKIX. Tell your healthcare provider about any side effect that bothers you or that does not go away.

Please see Important Safety Information on pages 9-10 and accompanying Full Prescribing Information.
The **WAKIX for You** Support Program Is Here to Help

Once your healthcare provider prescribes **WAKIX®** (pitolisant), you have the option to sign up for **WAKIX for You**, a support program to help you get started and stay on track with WAKIX.

- Works with your insurance providers to determine coverage
- Offers financial support programs for eligible patients
- Coordinates shipment with the pharmacy to deliver WAKIX directly to you
- Provides educational resources

To find out more about how **WAKIX for You** can help, contact a Case Manager.
